SHADY GROVE PHARMACY

We care for you and your family as our friends and neighbors... because you are.

At Shady Grove Pharmacy, we believe there's a better way to do pharmacy. We're smaller than our chain competitors, but we use the same suppliers and offer the same medications at an equally competitive price. The big difference is the exceptional level of personal service and care you receive here. To us, you're a person, not a prescription.

About Atropine Drops (Atropine ophthalmic solution)

Atropine drops are a safe and effective way to treat childhood nearsightedness.

In a five-year clinical trial, 0.01% atropine drops, the same medication used to safely treat lazy eye for decades, were shown to slow down the progression of myopia in children up to 50 percent with almost no side effects. These findings offer hope, especially for the parents whose children frequently require costly new prescription glasses due to rapid changes in the eyes throughout childhood. Even more, though corrective lenses can be a short-term solution to nearsightedness, they do not prevent the advancement of severe nearsightedness in later life, which is linked to increased risk of serious eye complications including macular degeneration, glaucoma, retinal detachment and premature cataracts. By offering a better way to manage myopia early in life, the hope is that 0.01% atropine drops will not only offer relief to those suffering from myopia currently, but also reduce the number of people who develop these complications with age.

DON'T HAVE A PRESCRIPTION YET?

We can help with that. More than 30 referring ophthalmologists in 10+ states currently trust Shady Grove Pharmacy to fill atropine drops prescriptions for their patients.
